WO 2005/020825 PCT/US2004/026932

## We claim:

1. A nerve regeneration device comprising a polyhydroxyalkanoate polymer in the form of a porous conduit.

- 2. The device of claim 1wherein the polymer comprises 4-hydroxybutyrate.
- 3. The device of claim 2 wherein the polymer is poly-4-hydroxybutyrate.
- 4. The device of claim 1 wherein the pores of the conduit are greater than  $5\mu m$  in diameter.
- 5. The device of claim 1 wherein the pores of the conduit are less than 500  $\mu m$  in diameter.
- 6. The device of claim 1 wherein the conduit comprises a material selected from the group consisting of nerve cells, growth factors, and drugs.
- 7. A method for preparing a nerve regeneration device comprising a polyhydroxyalkanoate polymer in the form of a porous conduit wherein the device is prepared by thermally induced phase separation of the polymer in a solvent in combination with salt particles, removing the polymer solvent, and removing the salt particles.
- 8. The method of claim 7 comprising leaching with an alcohol followed by leaching with water or a solution comprising a surfactant.
- 9. The method of claim 7 for preparing the device of claim 1 wherein the device is prepared by a combination of thermally induced phase separation and poragen leaching.
- 10. The method of claim 8 wherein the surfactant is a polysorbate
- 11. A method of nerve repair or regeneration comprising providing a nerve regeneration device comprising a

WO 2005/020825 PCT/US2004/026932

polyhydroxyalkanoate polymer in the form of a wrapped porous conduit.

- 12. The method of claim 11 comprising inserting severed nerve ends into the conduit or wrapping the nerve ends with the polymer and sealing it into a conduit.
- 13. The method of claim 12 wherein the device is sealed by application of heat.
- 14. The method of claim 11 providing an axonal regeneration rate of at least 0.8 mm per day across a 10 mm sciatic nerve gap in an animal or human.
